van lining**

Light as a feather

Fewer emissions

Easy to clean

Extra service load

con-pearl® ● vs. wood ●

Sustainable

Stability

Abrasion resistance

Non-slip

Cleaning

No mould growth

con-pearl® van linings offer an alternative to wooden linings

**Extra service load** due to low weight, that's our motto! Our trunk lining is up to **60% lighter** than a conventional one made of wood. This means an increase in service load of approx. 5%.

The stability of the van flooring and van liner is not affected by the low weight and is 100% comparable to wood.

The low weight results in **fuel savings** and produces fewer emissions. For a positive climate balance (WLTP).

From recycling to recycling - our way to greater sustainability.

Our con-pearl® van linings are made from recycled, high-quality recycled material. Our products are Made in Germany. All products can be returned to the recycling cycle after their very long service life.

## Van flooring

### ALLROUND

#### TPO surface

ideal balance between durability and slip resistance (coefficient of sliding friction:  $\mu \geq 0.45$ )

### STRONG

#### Surface made of PP fabric

Robust and durable against heavy loads

## Van liner

### ALLROUND

#### Functional and versatile

One-sided structure 1,500 g/m<sup>2</sup>

### STRONG

#### Extremely stable

One and two-sided structure 1,800 g/m<sup>2</sup>

### FLEX

#### Ultra-light & flexible

With internal foam core  
Two-sided structure 1,340 g/m<sup>2</sup>

### FIRE RETARDANT

#### Fire retardant

Certified to ECE R118,  
One-sided structure 1,800 g/m<sup>2</sup>
